1
Qualify and write
Storage gate
verified page-cache eviction
byte accounting · ≥ 300 MB/s
Layout sweep
six group-size requests
sent to every writer
2
Audit
Capability audit
emitted layout read back
from every written file
Verified layout space $\mathcal{L}_X$
distinct emitted layouts
Default point d_X
written with the control omitted
3
Measure and attribute
Timed measurements
one reader per access · one thread
seven repetitions
cold and warm cache
Reader-lifetime probe
per-batch vs per-access, same host
Default vs optimized
default penalty P_X
inflation Φ_{default}
per dataset, access, and cache mode
